## TEST REPORT DESCRIPTION

Applicant : Shenzhen Sonoff Technologies Co.,Ltd.  
Room 1001, 10F, Building 8, Lianhua Industrial Park, Longyuan Road, Longhua District, Shenzhen, GD, China

Manufacturer : Shenzhen Sonoff Technologies Co.,Ltd.  
Room 1001, 10F, Building 8, Lianhua Industrial Park, Longyuan Road, Longhua District, Shenzhen, GD, China

EUT : Wi-Fi Smart Wall Switch

Model : T0US1C, T0US2C, T0US3C, T2US1C, T2US2C, T2US3C, T3US1C, T3US2C, T3US3C

Trademark : 

Test Procedure Used:  
EN IEC 62311: 2020

The device described above is tested by EMTEK (SHENZHEN) CO., LTD. to determine the maximum emission levels emanating from the device and the severe levels of the device can endure and its performance criterion. This report shows the EUT to be technically compliant with the EN IEC 62311: 2020 requirements. The test results are contained in this report and EMTEK (SHENZHEN) CO., LTD. is assumed full responsibility for the accuracy and completeness of these tests.

This report applies to above tested sample only and shall not be reproduced in part without written approval of EMTEK (SHENZHEN) CO., LTD.

Date of Test : April 1, 2019 to April 17, 2019

Prepared by :   
Lance Li/Editor

Reviewer :   
Joe Xia/Supervisor

**Note:** for more details, please refer to the User's manual of the EUT.

## 1.2 Test Facility

Site Description  
EMC Lab.

: **Accredited by CNAS**  
The Certificate Registration Number is L2291.  
The Laboratory has been assessed and proved to be in compliance with  
CNAS-CL01 (identical to ISO/IEC 17025:2017)

**Accredited by FCC**  
Designation Number: CN1204  
Test Firm Registration Number: 882943

**Accredited by A2LA**  
The Certificate Number is 4321.01.

**Accredited by Industry Canada**  
The Conformity Assessment Body Identifier is CN0008

Name of Firm  
Site Location

: EMTEK (SHENZHEN) CO., LTD.  
: Building 69, Majialong Industry Zone, Nanshan District, Shenzhen,  
Guangdong, China

## 2. GENERAL PRODUCT INFORMATION

### 2.1 Basic Restriction

The essential requirements of Directive 99/5/EC in the article 3.1(a) and the limits must be taken from Council Recommendation 99/5/EC for General Population or from the ICNIRP Guidelines for Occupational Exposure. EN 62479:2010 Generic standard to demonstrate the compliance of low power electronic and electrical apparatus with the basic restrictions related to human exposure to electromagnetic fields. The average power of EUT is less than 20mW then comply with basic restriction (1999/5/EC) without test.

Council Recommendation 99/5/EC Annex II

Basic restrictions for electric, magnetic and electromagnetic fields (0 Hz to 300 GHz)

| Frequency range | Magnetic flux density (mT) | Current density (mA/m <sup>2</sup> ) (rms) | Whole body average SAR (W/kg) | Localized SAR (head and trunk) (W/kg) | Localized SAR (limbs) (W/kg) | Power density, S (W/m <sup>2</sup> ) |
|-----------------|----------------------------|--|-------------------------------|---------------------------------------|------------------------------|--------------------------------------|
| 0Hz             | 40                         | -  | -                             | -                                     | -                            | -                                    |
| >0-1Hz          | -                          | 8  | -                             | -                                     | -                            | -                                    |
| 1-4Hz           | -                          | 8/f  | -                             | -                                     | -                            | -                                    |
| 4Hz-1000Hz      | -                          | 2  | -                             | -                                     | -                            | -                                    |
| 1000Hz-100kHz   | -                          | f/500                                      | -                             | -                                     | -                            | -                                    |
| 100kHz-10MHz    | -                          | f/500                                      | 0.08                          | 2                                     | 4                            | -                                    |
| 10MHz-10GHz     | -                          | -  | 0.08                          | 2                                     | 4                            | -                                    |
| 10GHz-300GHz    | -                          | -  | -                             | -                                     | -                            | 10                                   |

Note:

1. f is the frequency in Hz.
2. The basic restriction on the current density is intended to protect against acute exposure effects on central nervous system tissues in the head and trunk of the body and includes a safety factor. The basic restrictions for ELF fields are based on established adverse effects on the central nervous system. Such acute effects are essentially instantaneous and there is no scientific justification to modify the basic restrictions for exposure of short duration. However, since the basic restriction refers to adverse effects on the central nervous system, this basic restriction may permit higher current densities in body tissues other than the central nervous system under the same exposure conditions.
3. Because of electrical inhomogeneity of the body, current densities should be averaged over a cross section of 1 cm<sup>2</sup> perpendicular to the current direction.
4. For frequencies up to 100kHz, AV current density values can be obtained by multiplying the rms value by  $\sqrt{2}$  (=1.414). For pulses of duration tp the equivalent frequency to apply in the basic restrictions should be calculated as  $1/(2tp)$ .
5. For frequencies up to 100kHz and for pulsed magnetic fields, the maximum current

density associated with the pulses can be calculated from the rise/fall times and the maximum rate of change of magnetic flux density. The induced current density can then be compared with the appropriate basic restriction.

6. All SAR values are to be averaged over any six-minute period.
7. Localised SAR averaging Mass is any 10g of contiguous tissue; the maximum SAR so obtained should be the value used for the estimation of exposure. These 10g of tissue are intended to be a mass of contiguous tissue with nearly homogeneous electrical properties. In specifying a contiguous mass of tissue, it is recognized that this concept can be used in computational dissymmetry but may present difficulties for direct physical measurements. A simple geometry such as cubic tissue mass can be used provided that the calculated dissymmetric quantities have conservative values relative to the exposure guidelines.
8. For pulses of duration  $t_p$  the equivalent frequency to apply in the basic restrictions should be calculated as  $f = 1/(2t_p)$ . Additionally, for pulsed exposures, in the frequency range 0.3 to 10GHz and for localized exposure of the head, in order to limit and avoid auditory effects caused by thermoplastic expansion, an additional basic restriction is recommended. This is that the SA should not exceed 2mJ kg<sup>-1</sup> averaged over 10g of tissue.

## 2.2 Table for Filed Antenna

| Ant. | Antenna Type     | Gain (dBi) |
|------|------------------|------------|
| 1.   | Integral antenna | 1          |

### 3. TEST RESULT

#### 3.1. EMF Exposure Measurement

##### 3.1.1 Limit

##### Reference Levels

Council Recommendation 99/519/EC Annex III

Reference levels for electric, magnetic and electromagnetic fields (0 Hz to 300GHz)

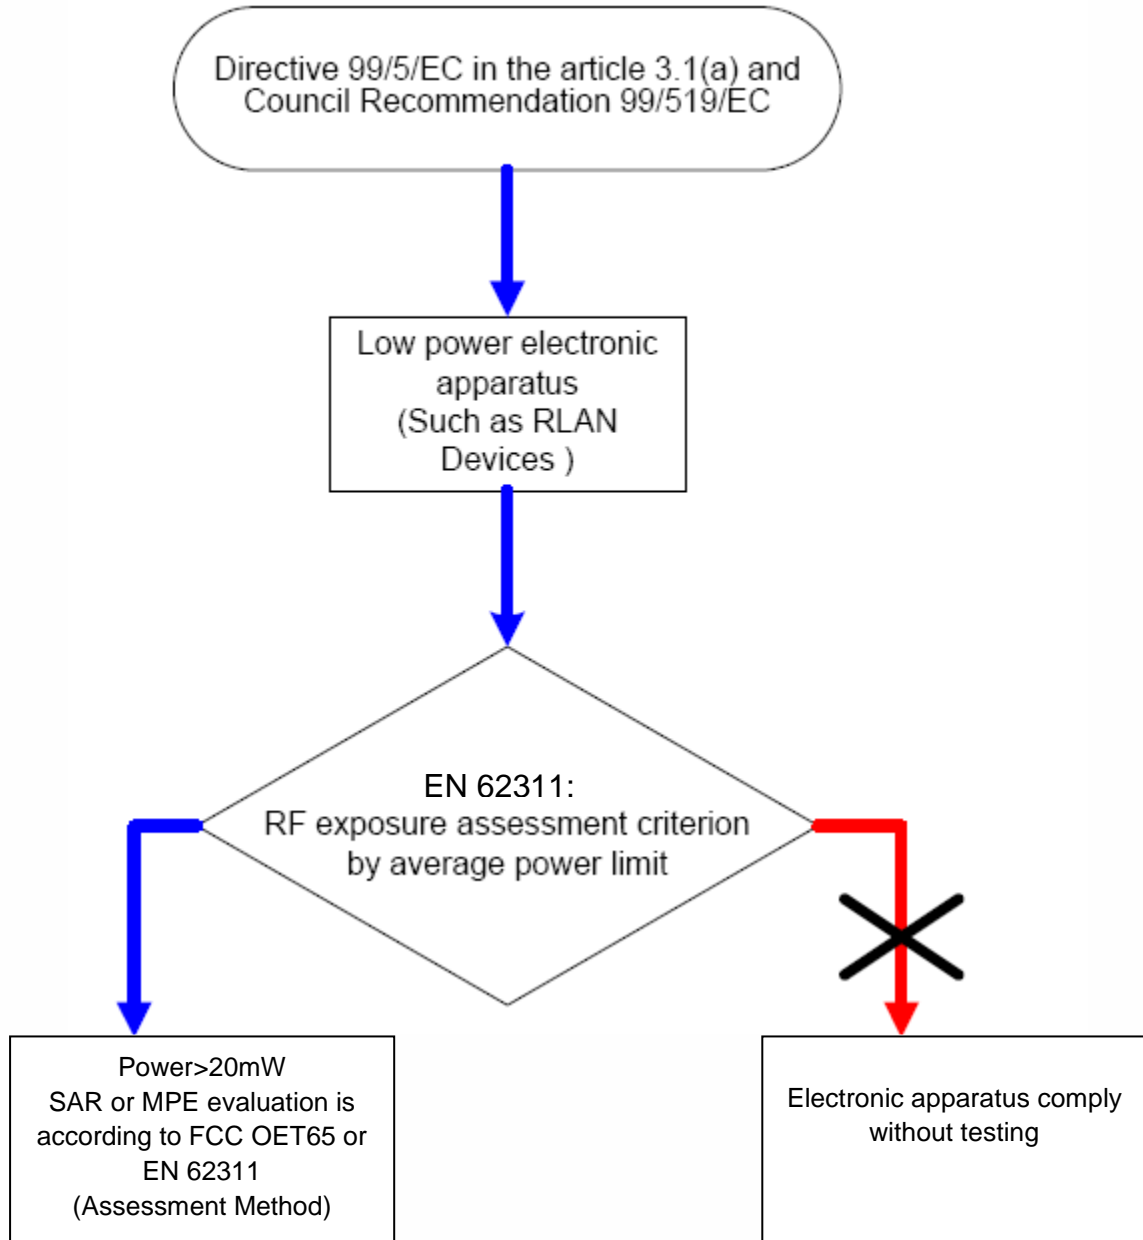

| Frequency range | E-field strength (V/m) | H-field strength (A/m)  | B-field (μT)          | Equivalent plane wave power density Seq (W/m <sup>2</sup> ) |
|-----------------|------------------------|-------------------------|-----------------------|---|
| 0-1 Hz          | -                      | $3.2 \times 10^4$       | $4 \times 10^4$       | -   |
| 1-8 Hz          | 10000                  | $3.2 \times 10^4 / f^2$ | $4 \times 10^4 / f^2$ | -   |
| 8-25 Hz         | 10000                  | $4000 / f$              | $5000 / f$            | -   |
| 0.025-0.8 kHz   | $250 / f$              | $4 / f$                 | $5 / f$               | -   |
| 0.8-3 kHz       | $250 / f$              | 5                       | 6.25                  | -   |
| 3-150 kHz       | 87                     | 5                       | 6.25                  | -   |
| 0.15-1 MHz      | 87                     | $0.73 / f$              | $0.92 / f$            | -   |
| 1-10 MHz        | $87 / f^{1/2}$         | $0.73 / f$              | $0.92 / f$            | -   |
| 10-400 MHz      | 28                     | 0.073                   | 0.095                 | 2   |
| 400-2000 MHz    | $1.375 f^{1/2}$        | $0.0037 f^{1/2}$        | $0.0046 f^{1/2}$      | $f / 200$   |
| 2-300 GHz       | 61                     | 0.16                    | 0.2                   | 10  |

##### Notes:

1. As indicated in the frequency range column.
2. For frequencies between 100kHz and 10 GHz, Seq, E2, H2 and B2 are to averaged over any six-minute period.
3. For frequencies exceeding 10 GHz, Seq, E2, H2, and B2 are averaged over any 68/1.05-minute period(in GHz).
4. No E-field value is provided for frequencies < 1 Hz, which are effectively static electric fields. For most people the annoying perception of surface electric charges will not occur at field strengths less than 25 kV/m. Spark discharges causing stress or annoyance should be avoided.

### 3.1.2. Evaluation Routine

#### Low Power Electronic Apparatus for RF exposure evaluation routine

### 3.1.3. EMF Exposure Levels Calculated

## 3.2 Detailed results

### 3.2.1 Summary of Results

| Frequency Band | Limit (W/ m <sup>2</sup> ) | Result (W/ m <sup>2</sup> ) | Verdict |
|----------------|----------------------------|-----------------------------|---------|
| WIFI           | 10                         | 0.06                        | passed  |

### 3.2.2 Measurement of RF conducted Power

| Band        | Max EIRP (dBm) |
|-------------|----------------|
| WIFI 2.4GHz | 13.86 dBm      |

### 3.2.3 MPE Evaluation 13.86

$$S = \text{EIRP} / 4\pi R^2$$

R = distance to the center of radiation of antenna (in meter) = 0.20 m

Note:

- 1)  $\text{EIRP} = P * G * \text{Duty factor}$
- 2)  $P \text{ (Watts)} = (10^{(\text{dBm} / 10)}) / 1000$
- 3)  $G \text{ (Antenna gain in numeric)} = 10^{(\text{Antenna gain in dBi} / 10)}$
- 4) Duty factor

| Mode | Duty factor |
|------|-------------|
| WIFI | 1           |

5)  $\pi = 3.142$

1) The maximum power density at a distance of 0.2 m for WIFI is shown as below:

| Antenna Gain(dBi) | Antenna Gain (numeric) | AV Output Power (dBm) | AV Output Power (W) | Duty factor | Calculated RF Exposure (W/ m <sup>2</sup> ) | Limit (W/ m <sup>2</sup> ) |
|-------------------|------------------------|-----------------------|---------------------|-------------|---|----------------------------|
| 2                 | 1.26                   | 13.86                 | 0.024               | 1           | 0.06  | 10                         |

### 3.2.4 Measurement Uncertainty

Extended Uncertainty (k=2) 95%      0.5dB

-----END OF REPORT-----
